YOHPAL LIVE RELEASE REVIEW BOARD — FINAL SESSION

Daniel Macharia <danielmacharia43@gmail.com>
To: <daniel@ics.ac.ke>

Sat, 11 Jul at 12:38

I can execute the **Release Review Board session** using the evidence that has been submitted. However, I **cannot honestly issue a GO or CONDITIONAL GO** unless the immutable RC1 Evidence Pack contains all of the required proof.

The latest Release 1.0F verification report confirms strong implementation progress, but it also explicitly records:

- **No Git commit**
- **No release tag**
- **No Android or iPhone device validation**
- **Crashlytics instrumented but unverified**
- **Environment configuration only partially complete**
- **Rewarded-ad server-side verification still outstanding**

report F-G .pdf

Those are mandatory certification gates.

YOHPAL LIVE RELEASE REVIEW BOARD — FINAL SESSION

Release Candidate: YohPal Live 1.0G-RC1

Evidence Reviewed:

- Original Production Readiness Review
- Release 1.0F Implementation Status Report
- Previous Video Engine evidence
- Previous Platform governance evidence

report F-G .pdf

Certification Gate Review

Gate	Decision	Basis
Architecture	PASS	Mature architecture and prior platform evidence
Build	PASS	Source verified; 32/32 tests reported passing report F-G .pdf
Security	CONDITIONAL PASS	Significant fraud controls improved, but rewarded-ad SSV still outstanding report F-G .pdf
Authentication	CONDITIONAL PASS	Password reset implemented in code; device verification still missing report F-G .pdf
Feed & Navigation	PASS	Analytics route, Search, Live Discovery and feed recovery improved in source report F-G .pdf
Live Streaming	CONDITIONAL PASS	Reconnect logic implemented, but not validated on a real network interruption report F-G .pdf
Observability	HOLD	Crashlytics wired but no release-build proof report F-G .pdf
Android Device Validation	HOLD	No submitted device evidence report F-G .pdf
iPhone Device Validation	HOLD	No submitted device evidence report F-G .pdf

Operations	HOLD	No immutable tagged RC1 evidence pack

Release Review Board Decision

Enterprise Certification

Decision: WITHHOLD

Reason:

The required immutable RC1 evidence package has not yet been fully demonstrated.

Executive Release Decision

GO

No

CONDITIONAL GO

No

NO-GO

Yes

Reasons

The current evidence still lacks:

- Immutable tagged RC1 commit.
- Android regression evidence.
- iPhone regression evidence.
- Release-build Crashlytics verification.
- Complete environment abstraction.
- Rewarded-ad server-side verification.

These are all explicitly identified as incomplete or unverified in the latest implementation status report.

report F-G .pdf

Approved Rollout

Rollout	Decision
Internal engineering validation	✔ Approved
Controlled QA	✔ Approved
1% public	✘ Not approved
5% public	✘ Not approved
General Availability	✘ Not approved

Release Review Board Resolution

Resolution ID: RRB-YL-1.0G-RC1-001

The Board finds that:

- 1. The Release 1.0F implementation substantially improves the production readiness of YohPal Live.
- 2. The remaining blockers are primarily **runtime verification** rather than implementation.
- 3. Enterprise release evidence remains incomplete.
- 4. General Availability cannot be approved until the missing runtime evidence is independently verified.

Resolution: NO-GO

Required Codebase — Release Decision Model

```
enum ReleaseBoardDecision {
    go,
    conditionalGo,
    noGo,
}

final class ReleaseBoardResult {
    const ReleaseBoardResult({
        required this.decision,
        required this.summary,
        required this.blockers,
    });

    final ReleaseBoardDecision decision;
    final String summary;
    final List<String> blockers;
}

ReleaseBoardResult evaluateRc1({
    required bool taggedCommit,
    required bool androidValidated,
    required bool iosValidated,
    required bool crashlyticsVerified,
    required bool rewardedAdsVerified,
    required bool environmentComplete,
}) {
    final blockers = <String>[];

    if (!taggedCommit) {
        blockers.add('Immutable tagged RC1 commit missing');
    }

    if (!androidValidated) {
        blockers.add('Android validation missing');
    }

    if (!iosValidated) {
        blockers.add('iPhone validation missing');
    }

    if (!crashlyticsVerified) {
        blockers.add('Crashlytics not proven');
    }

    if (!rewardedAdsVerified) {
        blockers.add('Rewarded-ad SSV not verified');
    }

    if (!environmentComplete) {
        blockers.add('Environment abstraction incomplete');
    }

    if (blockers.isNotEmpty) {
        return ReleaseBoardResult(
            decision: ReleaseBoardDecision.noGo,
            summary: 'Release candidate does not yet satisfy mandatory GA gates.',
            blockers: blockers,
        );
    }

    return const ReleaseBoardResult(
        decision: ReleaseBoardDecision.go,
        summary: 'Release candidate satisfies mandatory GA gates.',
        blockers: [],
    );
}
```

Final Executive Position

Based on the evidence currently available:

Final Decision: NO-GO

This is not a reflection of the engineering effort—the reports show substantial progress—but of the remaining certification evidence. Once the immutable RC1 Evidence Pack is submitted and the missing runtime validations are independently confirmed, the Release Review Board can reconvene and reassess the decision.
