YOHPAL LIVE CREATOR STUDIO RELEASE 1.2A
CREATOR INTELLIGENCE PLATFORM (CIP)

Executive Vision

Release **1.2A** transforms Creator Studio into an **intelligent production platform** powered by **YohPal Brain**.

Instead of AI being a single feature, AI becomes a collection of independent, reusable services that assist creators from planning to publishing.

Core Principle:

Every AI capability should operate as an independent service connected through YohPal Brain rather than being embedded directly into the mobile application.

Platform Architecture

Every module communicates through YohPal Brain APIs.

Module 1 — Camera Coach Service

Purpose

Continuously analyse the live camera preview and guide the creator before poor footage is recorded.

Inputs

- Camera frames
- Device orientation
- Lens metadata
- Ambient light estimate

Outputs

- Framing score
- Lighting score
- Stability score
- Face visibility
- Suggestions

Example:

Lighting: 72%

Suggestions

- Move towards window
- Raise camera slightly
- Reduce background clutter

Module 2 — Speech Coach Service

Real-time analysis

Measures:

- Speaking speed
- Voice energy
- Clarity
- Long pauses
- Filler words
- Confidence

Outputs:

Speech Pace

92%

Energy

83%

Suggestions

- Slow down slightly
- Smile
- Increase enthusiasm

Module 3 — Story Coach

AI predicts audience retention before publishing.

Analyses:

- Hook
- Story flow
- Emotional progression
- Call-to-action timing
- Ending quality

Produces:

Retention Prediction

81%

Recommendations

- Shorten first scene
- Add CTA earlier
- Increase emotional payoff

Module 4 — Commerce Coach

Unlike traditional editors, YohPal should optimize videos for outcomes.

The AI determines whether the content should include:

- Product card
- Job application
- Hustle task
- Course
- Wallet promotion

- Business profile
- Donation
- Live stream

The creator decides whether to accept each suggestion.

Module 5 — Creator Digital Twin

Each creator receives a continuously improving production profile.

The Digital Twin learns:

- Preferred editing style
- Music choices
- Caption style
- Thumbnail preferences
- Audience response
- Publishing times
- Conversion history

Future sessions begin with those learned preferences rather than starting from scratch.

AI Assistance Levels

AI should always be under user control.

Level 0 — Manual

AI disabled.

Creator edits everything.

Level 1 — Suggestions

AI only recommends.

Nothing changes automatically.

Level 2 — Assisted

AI performs actions after creator approval.

Example:

- Apply subtitles
 - Apply trim
 - Apply thumbnail
-

Level 3 — Auto Production

AI completes the full production pipeline.

Creator reviews before publishing.

Default for new users should remain conservative. Higher automation levels should require explicit opt-in and be reversible.

Privacy Controls

Creators should decide exactly what AI can analyse.

Settings should include:

Camera analysis

ON / OFF

Speech analysis

ON / OFF

Digital Twin learning

ON / OFF

AI improvement using previous projects

ON / OFF

Cloud processing

Always Ask

Wi-Fi Only

Always Allow

Users should be able to delete or reset their Creator Digital Twin profile.

AI Effectiveness Dashboard

Instead of simply reporting AI usage, YohPal should measure whether the AI actually helps.

Metrics:

Recording quality

Editing quality

Publishing quality

Retention

Watch time

Followers

Products sold

Jobs applied

Courses enrolled

Revenue

The dashboard should answer:

“Did AI improve this creator’s results?”

A/B Experiment Framework

Every AI recommendation should be measurable.

Example experiment:

Group A

Standard editing.

Group B

Camera Coach enabled.

Compare:

- Viewer retention
- Completion rate
- Shares
- Follows
- Revenue

The same approach applies to:

- Story Coach
- Commerce Coach
- AI captions
- AI thumbnails

- AI publishing

This allows product decisions to be based on measured outcomes rather than assumptions.

Required Codebase

AI Service Contract

packages/yohpal_brain/contracts/creator_ai_service.dart

```
abstract interface class CreatorAiService<TInput, TOutput> {  
  String get serviceName;  
  
  Future<TOutput> analyse(TInput input);  
}
```

Camera Coach

```
class CameraCoachResult {  
  final double framingScore;  
  final double lightingScore;  
  final double stabilityScore;  
  final List<String> suggestions;  
  
  const CameraCoachResult({  
    required this.framingScore,  
    required this.lightingScore,  
    required this.stabilityScore,  
    required this.suggestions,  
  });  
}
```

Speech Coach

```
class SpeechCoachResult {  
  final double clarity;  
  final double pace;  
  final double confidence;  
  final List<String> suggestions;  
  
  const SpeechCoachResult({  
    required this.clarity,  
    required this.pace,  
    required this.confidence,  
    required this.suggestions,  
  });  
}
```

Story Coach

```
class StoryCoachResult {  
  final double retentionPrediction;  
  final double hookScore;  
  final List<String> recommendations;  
  
  const StoryCoachResult({  
    required this.retentionPrediction,  
    required this.hookScore,  
    required this.recommendations,  
  });  
}
```

Commerce Coach

```
enum CommerceSuggestionType {  
  product,  
  job,  
  hustle,  
  course,  
  walletOffer,  
  donation,  
  businessProfile,  
}
```

```
class CommerceSuggestion {
    final CommerceSuggestionType type;
    final String objectId;
    final Duration timestamp;
    final double confidence;

    const CommerceSuggestion({
        required this.type,
        required this.objectId,
        required this.timestamp,
        required this.confidence,
    });
}
```

Creator Digital Twin

```
class CreatorTwinProfile {
    final String creatorId;

    final String preferredCaptionStyle;
    final String preferredThumbnailStyle;
    final String preferredMusicGenre;

    final double averageHookStrength;
    final double averageRetention;
    final double averageConversion;

    const CreatorTwinProfile({
        required this.creatorId,
        required this.preferredCaptionStyle,
        required this.preferredThumbnailStyle,
        required this.preferredMusicGenre,
        required this.averageHookStrength,
        required this.averageRetention,
        required this.averageConversion,
    });
}
```

AI Assistance Level

```
enum AiAssistanceLevel {
    manual,
    suggestions,
    assisted,
    autoProduction,
}
```

Experiment Assignment

```
class CreatorExperimentAssignment {
    final String experimentId;
    final String variant;
    final DateTime assignedAt;

    const CreatorExperimentAssignment({
        required this.experimentId,
        required this.variant,
        required this.assignedAt,
    });
}
```

AI Outcome Metrics

```
class CreatorOutcomeMetrics {
    final double retention;
    final double completionRate;
    final double engagementRate;
    final double conversionRate;
    final double revenue;

    const CreatorOutcomeMetrics({
        required this.retention,
        required this.completionRate,
        required this.engagementRate,
        required this.conversionRate,
        required this.revenue,
    });
}
```

Release Success Criteria

Area	Target
Camera Coach	95%
Speech Coach	95%
Story Coach	95%
Commerce Coach	95%
Creator Digital Twin	90%
Privacy controls	100%
AI assistance settings	100%
Experiment framework	100%
Outcome analytics	95%

Long-Term Differentiator

The true competitive advantage is **not** simply adding AI editing.

It is creating a platform where the AI understands the creator’s objectives and helps them achieve measurable results across the YohPal ecosystem.

For example:

- A business owner receives suggestions that improve product sales.
- An educator receives suggestions that increase course enrolments.
- A recruiter receives suggestions that improve job applications.
- A creator receives suggestions that increase engagement and earnings.

The AI’s success should be measured by whether it helps creators reach those goals, while keeping users in control through transparent settings, clear explanations, and opt-in automation.

Next Smart Move

Build **YOHPAL LIVE CREATOR STUDIO RELEASE 1.2B — MULTIMODAL CREATOR INTELLIGENCE**, adding on-device and cloud AI orchestration for vision, speech, text and timeline analysis, with explainable recommendations, multilingual support, offline-capable coaching where practical, and continuous evaluation dashboards that measure creator success, AI adoption and business outcomes across the YohPal ecosystem.
