YOHPAL LIVE CREATOR STUDIO RELEASE 1.3A CREATOR AUTONOMY PLATFORM (CAP)

Executive Vision

Release **1.3A** changes the fundamental relationship between creators and AI.

Today's creator tools ask:

"How do you want to edit this video?"

YohPal should ask:

"What do you want to achieve?"

Everything else should be planned around that objective.

Instead of editing becoming the centre of the workflow, **the creator's goal becomes the centre.**

Creator Goal Engine

Every creator begins by choosing a reusable objective.

Creator Goal

↓

YohPal Brain

↓

Strategy

↓

Production Plan

Next Recommendation

Supported Goal Types

Business Growth

- Sell more products
 - Increase enquiries
 - Promote offers
 - Increase store visits
 - Increase reservations
-

Recruitment

- Recruit employees
 - Recruit interns
 - Recruit volunteers
 - Recruit affiliates
-

Education

- Increase course enrolments
 - Teach better
 - Improve student completion
 - Build authority
-

Creator Growth

- Increase followers
 - Increase engagement
 - Increase watch time
 - Increase subscriptions
-

Community

- Build community
 - Increase conversations
 - Increase Live participation
 - Increase shares
-

Revenue

- Increase gifts
 - Increase affiliate earnings
 - Increase wallet income
 - Increase creator revenue
-

Goal Builder

Creators can create their own reusable production goals.

Example

Goal

Recruit mechanics

Audience

Kenya

Age

18–35

Call to Action

Apply Now

Success Metric

Job applications

The goal becomes reusable across future productions.

AI Strategy Builder

Instead of generating isolated suggestions, YohPal Brain generates a complete production strategy.

Example:

Goal

Sell restaurant meals

↓

AI Strategy

Best recording time

↓

Best camera angle

↓

Recommended hook

↓

Recommended music

↓

Suggested captions

↓

Recommended thumbnail

↓

Suggested product object

↓

Publishing time

The creator reviews and accepts or edits the strategy.

Production Workflow Templates

Each goal automatically generates a workflow.

Example

Restaurant Promotion

Introduction

↓

Menu

↓

Preparation

↓

Customer reaction

↓

Offer

↓

Location

↓

CTA

Recruitment

Problem

↓

Company

↓

Opportunity

↓

Requirements

↓

Benefits

↓

Apply

Teaching

Question

↓

Explanation

↓

Demonstration

↓

Summary

↓

Course Link

These templates should remain editable.

AI Coaching Strategy

Coaching changes according to the selected goal.

Restaurant

↓

Focus on

Food

Lighting

Colour

Product visibility

Recruitment

↓

Focus on

Confidence

Authority

Speech

Clarity

Education

↓

Focus on

Explanation

Examples

Speech pace

Visual aids

The coaching engine therefore becomes goal-aware rather than generic.

Intelligent Publishing Plan

Instead of only asking:

Publish?

Brain creates

Publishing Plan

Example

Publish

Tuesday

7:30 PM

↓

Cross-post

↓

Share to followers

↓

Go Live after

↓

Boost product

↓

Notify customers

Recommendations should clearly distinguish between user-configured preferences, historical patterns and platform-wide observations.

Ecosystem Object Planner

Brain automatically suggests ecosystem objects.

Restaurant

↓

Market Product

Wallet Coupon

Map

Business Profile

Recruitment

↓

Job Card

Application Button

Employer Profile

Teaching

↓

Course

Quiz

Certificate

Live Session

The creator decides which objects to include.

Success Measurement

Instead of

Views

Likes

Measure

Goal achievement.

Restaurant

↓

Orders

Recruitment

↓

Applications

Teaching

↓

Course enrolments

Commerce

↓

Revenue

Creator

↓

Followers

This makes creator analytics outcome-oriented rather than engagement-only.

Creator Playbooks

Creators can save successful strategies.

Example

Playbook

Weekend Product Promotion

↓

Use again

Playbooks include:

- Recording structure
- Camera setup
- AI coaching profile
- Publishing schedule
- Commerce objects
- CTA style

Creator Intelligence Dashboard

Instead of only analytics:

Goal

Increase Sales

↓

Current

72%

↓

AI Prediction

85%

↓

Recommendations

3

Dashboard sections:

- Goal progress
- AI recommendation acceptance
- Publishing consistency
- Audience growth
- Revenue
- Goal completion trend

Creator Digital Twin Evolution

The Digital Twin becomes a strategic advisor.

It remembers:

- Preferred goals
- Successful playbooks
- Publishing habits
- Commerce performance
- Audience preferences
- Editing style

The creator can ask:

“Prepare another recruitment campaign like my best-performing one.”

Brain generates the strategy automatically.

Continuous Experimentation

Every strategy should be testable.

Example

Playbook A

↓

Playbook B

Compare:

- Retention
- Applications
- Revenue
- Orders
- Watch time

The system should preserve transparency by showing which differences are being tested and how success is measured.

Required Codebase

Creator Goal

```
enum CreatorGoalType {
    growFollowers,
    sellProducts,
    recruitTalent,
    teach,
    increaseRevenue,
    buildCommunity,
    promoteBusiness,
}

class CreatorGoal {
    final String id;
    final CreatorGoalType type;
    final String title;
    final String successMetric;

    const CreatorGoal({
        required this.id,
        required this.type,
        required this.title,
        required this.successMetric,
    });
}
```

Goal Strategy

```
class GoalStrategy {
    final CreatorGoal goal;
    final List<String> workflow;
    final List<String> coachingTips;
    final List<String> publishingPlan;

    const GoalStrategy({
        required this.goal,
        required this.workflow,
        required this.coachingTips,
        required this.publishingPlan,
    });
}
```

Creator Playbook

```
class CreatorPlaybook {
    final String id;
    final String title;
    final GoalStrategy strategy;

    const CreatorPlaybook({
        required this.id,
        required this.title,
        required this.strategy,
    });
}
```

Goal Outcome

```
class GoalOutcome {
    final double completion;
    final double revenue;
    final double engagement;
}
```

```
const GoalOutcome({
  required this.completion,
  required this.revenue,
  required this.engagement,
});
}
```

Strategy Recommendation

```
class StrategyRecommendation {
  final String recommendation;
  final String explanation;
  final double confidence;

  const StrategyRecommendation({
    required this.recommendation,
    required this.explanation,
    required this.confidence,
  });
}
```

Platform Workflow

Creator Autonomy Principles

Every AI feature should follow these rules:

1. **Creator chooses the goal.**
 2. AI recommends; the creator remains responsible for publishing.
 3. Every recommendation includes a clear explanation.
 4. Automation is optional and can be turned off.
 5. All AI changes are reversible.
 6. Personalization can be reviewed, exported where appropriate, or reset.
 7. Success is measured against creator-defined objectives, not only engagement metrics.
-

Recommended Platform Expansion

The Creator Autonomy Platform should become a shared YohPal capability, reusable by:

- **YohPal Live** — creators and live streamers.
- **YohPal Jobs** — recruitment campaigns.
- **YohPal Market** — commerce and product launches.
- **YC IOS** — educational and institutional content.
- **Business accounts** — promotional campaigns.
- **Government and NGOs** — public information campaigns.

That shared architecture avoids duplicating AI planning logic across products.

Required Engineering Principle

Introduce a **Goal Orchestrator** service inside YohPal Brain. Rather than every module inventing its own campaign logic, they should submit:

- goal,
- audience,
- constraints,
- available assets,

and receive back a structured production strategy. This keeps planning centralized, versioned and continuously improvable.

Next Smart Move

Build **YOH PAL BRAIN PLATFORM RELEASE A5 — GOAL ORCHESTRATION ENGINE**, making creator goals a platform service rather than a Creator Studio feature. The engine should generate structured strategies for Live, Jobs, Market, Education and Business modules, maintain reusable playbooks, expose a versioned Goal API and Strategy API, and evaluate outcomes through transparent experimentation while preserving creator choice and privacy. This establishes goal-driven intelligence as a reusable YohPal platform capability rather than application-specific logic.
